

For your support.  
**Preventive maintenance  
 for Land based Marioff  
 HI-FOG® MAU systems**

To ensure the safety of life and business continuity, it is important that your HI-FOG high-pressure water mist fire protection system is maintained by Marioff-certified service engineers on a regular basis. The program includes maintenance tasks as well as inspection and testing routines. When you keep up with the maintenance program, you secure the system's reliability during its lifetime.

A service agreement is the easiest way to keep your system performing. You can include all maintenance activities in the agreement which makes cost prediction easy.

 **Inspection and testing routines** are performed on weekly, monthly and quarterly basis by customer's site operator or by Marioff-certified service engineers.

**During maintenance,** Marioff-certified service engineers inspect the condition and performance of your system, and change worn parts. **More extensive maintenance** is performed every five years.

# Preventive maintenance for Land based Marioff HI-FOG Machinery Space Accumulator (MAU) system

MAU SYSTEM		Semi-annual/ annual	5 year – service	10 year – service
<b>Pump unit</b>
