

A close-up photograph of a red fire protection system component, likely a water mist fire protection system. The component is made of red-painted metal and features a yellow valve assembly with multiple black knobs and a silver handle. A blue motor is visible in the background. The image is used as a background for the top section of the document.

For your support.

## Marioff HI-FOG® Original Spare Parts

### Stay prepared

The Marioff HI-FOG water mist fire protection system is safety-critical equipment that protects your business and property. Minimize system downtime and secure your peace of mind by keeping a suitable spare part inventory on board. Learn more about the benefits of having recommended spare parts for your HI-FOG system below.

#### Critical spare parts

Certain components are essential in keeping your HI-FOG system ready for action. Malfunction of a vital part leads to system downtime and compromises the fire safety onboard.

IMO recommends that an appropriate inventory of essential spare parts must be carried on board the vessel. When there are spare parts available, it is possible to repair components immediately during maintenance.

#### Recommended spare parts

Wearable components are changed regularly before they reach the end of their lifetime. When you have the extensive OEM-recommended set of spare parts on hand, you can be confident the spare parts you need are available instantly.

Recommended and essential spare parts are dependent on the configuration of the HI-FOG system.

## Spare part packages

Spare part inventory is all about balance: you want to have the necessary spare parts but minimize the need for storage space.

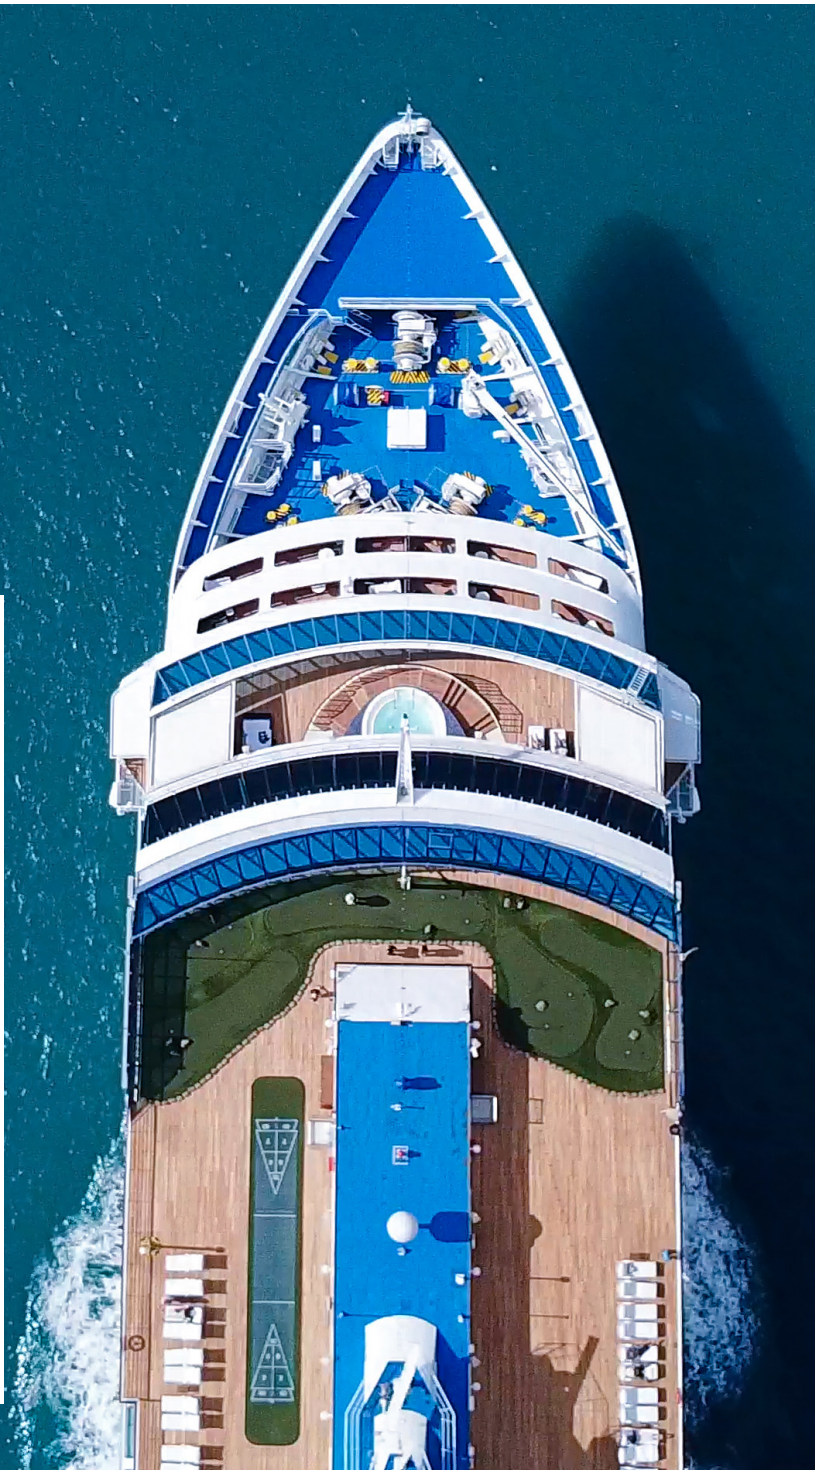

The contents of spare part packages for your HI-FOG system are based on:

- location
- size
- age
- configuration

We help you to select the customized spare part packages, tailored for your vessel, to ensure the correct spare parts are always available for your needs.
